EXPERIENCE

Amazon, Seattle — Sr Software Engineer

July 2013 - PRESENT

- Designed, implemented, built and scaled Amazon's financial systems including accounting ledger systems, invoicing and cash management systems, that helped launch Amazon Business (business.amazon.com).
- Built a batching and request routing solution that improved the write throughput of the core balance tracking service for the invoicing system by 1000%
- Delivered a React-based web application that enabled Amazon's accounts receivables team to perform cash management operations (cash application, write-offs, etc.)
- Redesigned and built the invoicing team's financial reporting solution to allow for multi-tenancy
- Currently working for the Alexa organization as technical leader for the Accessibility team. Responsibilities include design and implementation of critical access features like [Tap to Alexa](#), removing architectural deficiencies, enhancing the test framework, advising senior leadership with roadmap task prioritization, mentoring other software engineers

EDUCATION

New York University, New York — Master's in Computer Science

August 2011 - May 2013

GPA 3.95

University of Mumbai, Mumbai, India — Bachelor's in Information Technology

July 2006 - July 2010

GPA 3.4

SKILLS

Designing and building highly scalable distributed systems; data modeling and API design; web and mobile development

LANGUAGES AND FRAMEWORKS

Strong proficiency:

Java, Ruby, React, JUnit/Mockito, AWS, Spring, Git, UNIX tools

Working knowledge of:

React Native, Android, Gradle, Python

Currently learning:

Rust, Go
