EXPERIENCE

Amazon, Seattle — Sr Software Engineer, Alexa

August 2019 - PRESENT

- Currently working for the Alexa organization as technical leader for the Accessibility team. Responsibilities include design and implementation of critical access features like [Tap to Alexa](#), removing architectural deficiencies, enhancing the test framework, advising senior leadership with roadmap task prioritization, mentoring other software engineers

Amazon, Seattle — Software Engineer, eCommerce

July 2013 - July 2019

- Previous responsibilities included designing and building an invoicing and cash management platform used by Amazon Business. Built a solution to improve the write throughput of the core balance tracking web service backing this platform by 1000%
- Built a custom secondary indexing storage framework in Java for the invoicing platform; restructuring the platform's financial reporting solution to allow for multi-tenancy; building tools to enable Amazon's Accounts Receivable team to efficiently perform their cash assignment and application duties
- Built and launched an internal web application to provide fast and easy access to financial and business data to Amazon's Accounting team and other businesses by aggregating this data from multiple web services

Infosys, Pune, India — Software Engineer

July 2010 - July 2011

- Maintained a client web application built using JavaScript and SQL connectivity to MySQL
